

Econ 220f Notes

- RC: controlling for yrs. of experience
- RC: vertical line on shutdowns in graph quartiles
- RC: reg log pay departure
make table more clear
- consider semi-elasticity in reporting regression result
- consider reg departure $\ln(\text{pay})$ [or logit]
- resampling can let you estimate RE model
- what makes people stay? (eg. health insurance)
- long and short term effects (eg. shutdowns could be a signal of gov't performance)

Expected wages for each individual
and see difference to see if it

products
